# Scan Report

September 19, 2026

**Summary**

This document reports on the results of an automatic security scan. All dates are displayed using the timezone "Coordinated Universal Time", which is abbreviated "UTC". The task was "P2-". The scan started at Sat Sep 19 11:57:23 2026 UTC and ended at Sat Sep 19 12:25:34 2026 UTC. The report first summarises the results found. Then, for each host, the report describes every issue found. Please consider the advice given in each description, in order to rectify the issue.

## Contents

**1 Result Overview** **2**
1.1 Host Authentications . . . . . 2

**2 Results per Host** **2**
2.1 192.168.10.11 . . . . . 2
2.1.1 Medium general/tcp . . . . . 2
2.2 192.168.10.12 . . . . . 8
2.2.1 Medium general/tcp . . . . . 8
2.3 192.168.10.13 . . . . . 13
2.3.1 Medium general/tcp . . . . . 13

# 1 Result Overview

| Host | Critical | High | Medium | Low | Log | False P. |
|---|---|---|---|---|---|---|
| 192.168.10.11 | 0 | 0 | 3 | 0 | 0 | 0 |
| 192.168.10.12 | 0 | 0 | 3 | 0 | 0 | 0 |
| 192.168.10.13 | 0 | 0 | 3 | 0 | 0 | 0 |
| Total: 3 | 0 | 0 | 9 | 0 | 0 | 0 |

Vendor security updates are not trusted.
Overrides are off. Even when a result has an override, this report uses the actual threat of the result.
Information on overrides is included in the report.
Notes are included in the report.
This report might not show details of all issues that were found.
Issues with the threat level "Log" are not shown.
Issues with the threat level "Debug" are not shown.
Issues with the threat level "False Positive" are not shown.
Only results with a minimum QoD of 70 are shown.

This report contains all 9 results selected by the filtering described above. Before filtering there were 204 results.

## 1.1 Host Authentications

| Host | Protocol | Result | Port/User |
|---|---|---|---|
| 192.168.10.11 | SSH | Success | Protocol SSH, Port 22, User lab |
| 192.168.10.12 | SSH | Success | Protocol SSH, Port 22, User lab |
| 192.168.10.13 | SSH | Success | Protocol SSH, Port 22, User lab |

# 2 Results per Host

## 2.1 192.168.10.11

Host scan start Sat Sep 19 12:07:27 2026 UTC
Host scan end Sat Sep 19 12:16:31 2026 UTC

| Service (Port) | Threat Level |
|---|---|
| general/tcp | Medium |

### 2.1.1 Medium general/tcp

Medium (CVSS: 6.5)

NVT: Missing Linux Kernel mitigations for 'RETbleed' hardware vulnerabilities (INTEL-SA-00702, AMD-SB-1037)

**Product detection result**
`cpe:/a:linux:kernel`
`Detected by Detection of Linux Kernel mitigation status for hardware vulnerabili`
`↪ties (OID: 1.3.6.1.4.1.25623.1.0.108765)`

**Summary**
The remote host is missing one or more known mitigation(s) on Linux Kernel side for the referenced 'Retbleed' hardware vulnerabilities.

. . . continues on next page . . .

. . . continued from previous page . . .

**Quality of Detection (QoD):** 80%

**Vulnerability Detection Result**

```
The Linux Kernel on the remote host is missing the mitigation for the "retbleed"
↪ hardware vulnerabilities as reported by the sysfs interface:
sysfs file checked                              | Linux Kernel status (SSH resp
↪onse)
-------------------------------------------------------------------------------
↪-----
/sys/devices/system/cpu/vulnerabilities/retbleed | Vulnerable
Notes on the "Linux Kernel status (SSH response)" column:
- sysfs file missing: The sysfs interface is available but the sysfs file for th
↪is specific vulnerability is missing. This means the current Linux Kernel does
↪n't know this vulnerability yet. Based on this it is assumed that it doesn't p
↪rovide any mitigation and that the target system is vulnerable.
- Strings including "Mitigation:", "Not affected" or "Vulnerable" are reported d
↪irectly by the Linux Kernel.
- All other strings are responses to various SSH commands.
```

**Solution:**
**Solution type:** VendorFix
The following solutions exist:
- Update to a more recent Linux Kernel to receive mitigations on Kernel level and info about the mitigation status from it
- Enable the mitigation(s) in the Linux Kernel (might be disabled depending on the configuration)
Additional possible mitigations (if provided by the vendor) are to:
- install a Microcode update
- update the BIOS of the Mainboard
Note: Please create an override for this result if one of the following applies:
- the sysfs file is not available but other mitigations like a Microcode update is already in place
- the sysfs file is not available but the CPU of the host is not affected
- the reporting of the Linux Kernel is not correct (this is out of the control of this VT)

**Affected Software/OS**
Various Intel and AMD CPUs. Please see the references for the full list of affected CPUs.

**Vulnerability Detection Method**
Checks previous gathered information on the mitigation status reported by the Linux Kernel.

### 2.2.1 Medium general/tcp

Medium (CVSS: 6.5)

NVT: Missing Linux Kernel mitigations for 'RETbleed' hardware vulnerabilities (INTEL-SA-00702, AMD-SB-1037)

**Product detection result**

```
cpe:/a:linux:kernel
Detected by Detection of Linux Kernel mitigation status for hardware vulnerabili
↪ties (OID: 1.3.6.1.4.1.25623.1.0.108765)
```

**Summary**

The remote host is missing one or more known mitigation(s) on Linux Kernel side for the referenced 'Retbleed' hardware vulnerabilities.

**Quality of Detection (QoD):** 80%

**Vulnerability Detection Result**

```
The Linux Kernel on the remote host is missing the mitigation for the "retbleed"
↪ hardware vulnerabilities as reported by the sysfs interface:
sysfs file checked                              | Linux Kernel status (SSH resp
↪onse)
-------------------------------------------------------------------------------
↪-----
/sys/devices/system/cpu/vulnerabilities/retbleed | Vulnerable
Notes on the "Linux Kernel status (SSH response)" column:
- sysfs file missing: The sysfs interface is available but the sysfs file for th
↪is specific vulnerability is missing. This means the current Linux Kernel does
↪n't know this vulnerability yet. Based on this it is assumed that it doesn't p
↪rovide any mitigation and that the target system is vulnerable.
- Strings including "Mitigation:", "Not affected" or "Vulnerable" are reported d
↪irectly by the Linux Kernel.
- All other strings are responses to various SSH commands.
```

**Solution:**
**Solution type:** VendorFix
The following solutions exist:
- Update to a more recent Linux Kernel to receive mitigations on Kernel level and info about the mitigation status from it
- Enable the mitigation(s) in the Linux Kernel (might be disabled depending on the configuration)
Additional possible mitigations (if provided by the vendor) are to:

Medium (CVSS: 5.5)

NVT: Missing Linux Kernel mitigations for 'Processor MMIO Stale Data' hardware vulnerabilities (INTEL-SA-00615)

**Product detection result**

```
cpe:/a:linux:kernel
Detected by Detection of Linux Kernel mitigation status for hardware vulnerabili
↪ties (OID: 1.3.6.1.4.1.25623.1.0.108765)
```

**Summary**

The remote host is missing one or more known mitigation(s) on Linux Kernel side for the referenced 'Processor MMIO Stale Data' hardware vulnerabilities.

**Quality of Detection (QoD):** 80%

**Vulnerability Detection Result**

```
The Linux Kernel on the remote host is missing the mitigation for the "mmio_stal
↪e_data" hardware vulnerabilities as reported by the sysfs interface:
sysfs file checked                                    | Linux Kernel status (S
↪SH response)
------------------------------------------------------------------------------
↪-----------------------------------------------------
/sys/devices/system/cpu/vulnerabilities/mmio_stale_data | Vulnerable: Clear CPU
↪buffers attempted, no microcode; SMT Host state unknown
Notes on the "Linux Kernel status (SSH response)" column:
- sysfs file missing: The sysfs interface is available but the sysfs file for th
↪is specific vulnerability is missing. This means the current Linux Kernel does
↪n't know this vulnerability yet. Based on this it is assumed that it doesn't p
↪rovide any mitigation and that the target system is vulnerable.
- Strings including "Mitigation:", "Not affected" or "Vulnerable" are reported d
↪irectly by the Linux Kernel.
- All other strings are responses to various SSH commands.
```

**Solution:**
**Solution type:** VendorFix
The following solutions exist:
- Update to a more recent Linux Kernel to receive mitigations on Kernel level and info about the mitigation status from it
- Enable the mitigation(s) in the Linux Kernel (might be disabled depending on the configuration)
Additional possible mitigations (if provided by the vendor) are to:
- install a Microcode update
- update the BIOS of the Mainboard
Note: Please create an override for this result if one of the following applies:
- the sysfs file is not available but other mitigations like a Microcode update is already in place
- the sysfs file is not available but the CPU of the host is not affected
- the reporting of the Linux Kernel is not correct (this is out of the control of this VT)

**Affected Software/OS**

Various Intel CPUs. Please see the references for the full list of affected CPUs.

### 2.3.1 Medium general/tcp

Medium (CVSS: 6.5)

NVT: Missing Linux Kernel mitigations for 'RETbleed' hardware vulnerabilities (INTEL-SA-00702, AMD-SB-1037)

**Product detection result**

```
cpe:/a:linux:kernel
Detected by Detection of Linux Kernel mitigation status for hardware vulnerabili
↪ties (OID: 1.3.6.1.4.1.25623.1.0.108765)
```

**Summary**

The remote host is missing one or more known mitigation(s) on Linux Kernel side for the referenced 'Retbleed' hardware vulnerabilities.

**Quality of Detection (QoD):** 80%

**Vulnerability Detection Result**

```
The Linux Kernel on the remote host is missing the mitigation for the "retbleed"
↪ hardware vulnerabilities as reported by the sysfs interface:
sysfs file checked                              | Linux Kernel status (SSH resp
↪onse)
-------------------------------------------------------------------------------
↪-----
/sys/devices/system/cpu/vulnerabilities/retbleed | Vulnerable
Notes on the "Linux Kernel status (SSH response)" column:
- sysfs file missing: The sysfs interface is available but the sysfs file for th
↪is specific vulnerability is missing. This means the current Linux Kernel does
↪n't know this vulnerability yet. Based on this it is assumed that it doesn't p
↪rovide any mitigation and that the target system is vulnerable.
- Strings including "Mitigation:", "Not affected" or "Vulnerable" are reported d
↪irectly by the Linux Kernel.
- All other strings are responses to various SSH commands.
```

**Solution:**

**Solution type:** VendorFix

The following solutions exist:

- Update to a more recent Linux Kernel to receive mitigations on Kernel level and info about the mitigation status from it
- Enable the mitigation(s) in the Linux Kernel (might be disabled depending on the configuration)

Additional possible mitigations (if provided by the vendor) are to:

- install a Microcode update
- update the BIOS of the Mainboard

Note: Please create an override for this result if one of the following applies:

- the sysfs file is not available but other mitigations like a Microcode update is already in place
- the sysfs file is not available but the CPU of the host is not affected
- the reporting of the Linux Kernel is not correct (this is out of the control of this VT)

**Affected Software/OS**

Various Intel and AMD CPUs. Please see the references for the full list of affected CPUs.

**Vulnerability Detection Method**

Checks previous gathered information on the mitigation status reported by the Linux Kernel.

NVT: Missing Linux Kernel mitigations for 'Processor MMIO Stale Data' hardware vulnerabilities (INTEL-SA-00615)

**Product detection result**

cpe:/a:linux:kernel
Detected by Detection of Linux Kernel mitigation status for hardware vulnerabili
↪ties (OID: 1.3.6.1.4.1.25623.1.0.108765)

**Summary**

The remote host is missing one or more known mitigation(s) on Linux Kernel side for the referenced 'Processor MMIO Stale Data' hardware vulnerabilities.

**Quality of Detection (QoD):** 80%

**Vulnerability Detection Result**

The Linux Kernel on the remote host is missing the mitigation for the "mmio_stal
↪e_data" hardware vulnerabilities as reported by the sysfs interface:
sysfs file checked | Linux Kernel status (S
↪SH response)
---

...continues on next page ...

... continued from previous page ...

```
↪------------------------------------------------------------
/sys/devices/system/cpu/vulnerabilities/mmio_stale_data | Vulnerable: Clear CPU
↪buffers attempted, no microcode; SMT Host state unknown
Notes on the "Linux Kernel status (SSH response)" column:
- sysfs file missing: The sysfs interface is available but the sysfs file for th
↪is specific vulnerability is missing. This means the current Linux Kernel does
↪n't know this vulnerability yet. Based on this it is assumed that it doesn't p
↪rovide any mitigation and that the target system is vulnerable.
- Strings including "Mitigation:", "Not affected" or "Vulnerable" are reported d
↪irectly by the Linux Kernel.
- All other strings are responses to various SSH commands.
```

**Solution:**
**Solution type:** VendorFix
The following solutions exist:
- Update to a more recent Linux Kernel to receive mitigations on Kernel level and info about the mitigation status from it
- Enable the mitigation(s) in the Linux Kernel (might be disabled depending on the configuration)
Additional possible mitigations (if provided by the vendor) are to:
- install a Microcode update
- update the BIOS of the Mainboard
Note: Please create an override for this result if one of the following applies:
- the sysfs file is not available but other mitigations like a Microcode update is already in place
- the sysfs file is not available but the CPU of the host is not affected
- the reporting of the Linux Kernel is not correct (this is out of the control of this VT)

**Affected Software/OS**
Various Intel CPUs. Please see the references for the full list of affected CPUs.

**Vulnerability Detection Method**
Checks previous gathered information on the mitigation status reported by the Linux Kernel.
Details: `Missing Linux Kernel mitigations for 'Processor MMIO Stale Data' hardware vulne.↪..`
OID:1.3.6.1.4.1.25623.1.0.104247
Version used: `2026-07-10T06:54:17Z`

**Product Detection Result**
Product: `cpe:/a:linux:kernel`
Method: `Detection of Linux Kernel mitigation status for hardware vulnerabilities`
OID: 1.3.6.1.4.1.25623.1.0.108765
